DETAILED ACTION

Specification

The amendment filed 1/17/2007 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: Applicants replace the paragraph on page 8, lines 17-18 by a new paragraph just because to add the support for added claims 39-43 rejected under USC 112, first paragraph (new matter) in the previous Office action. This is improper and unacceptable. For example, nowhere in the specification supports a catalyst containing greater than 0.3 weight nowhere in the specification supports the disclosure "the selectivity to ethane for catalyst C is less than 100 mole %". Instead, it supports only 75.5. Generally speaking, the entire added paragraph totally lacks support.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 2, 4-17, 19, 20, 22-27, 29, 30, 32-38, 40, and 42 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to

reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification does not support the amended claims (see the entire specification for details and the above objection of the specification).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 10/600,609

Art Unit: 1764

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 2, 4-17, 19-20, 22-27, 29, 30, and 32-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bergmeister et al (WO 01/41923).

Bergmeister discloses a process substantially the same as the claimed process in which a catalyst containing palladium, silver (oxide or metal), potassium (less than 01 wt%), halide, namely potassium fluoride and a support such as alumina is used for selectively hydrogenating unsaturated hydrocarbons such as dienes and acetylenes in the presence of sulfur impurity (the abstract; page 3, line 23 thru page 5, line 22; page 7, lines 1-22; page 8, line 24; page 10, line 10, line 11-21; page 11, line 1; page 13, lines 4-13; page 15, line 24 thru page 17, line 25page 18, lines 26 thru page 19, line 4; especially table I, catalysts such as D).

Clearly, Bergmeister discloses a hydrogenation step very similar to the claimed process except that Bergmeister does not disclose the feed of the hydrogenation step is derived from a fractionation tower as called for in claim 1, namely depropanizer as called for in claims 20 and 30. However, as disclosed on page 2, lines 8-27, namely 18-19, Bergmeister discloses that sulfur impurities can be found in depropanizer.

Therefore, it would have been obvious to one having oridinary skill in the art at the time the invention was made to have modified the Bergmeister process by using the feed from the depropanizer for the selective hydrogenation to produce saturated hydrocarbons or olefins since the Bergmeister process can be operated in the presence of sulfur impurities.

Regarding claims 39-43, the results of the reaction with such a catalyst is expected to be inherent in the Bergmeister process which is operated in the present of similar catalysts.

Response to Arguments

Applicant's arguments filed 1/17/2006 have been fully considered but they are not persuasive.

The argument that the limitations newly added to the independent claims are not disclosed in the prior art is not persuasive since these limitations must be present in the prior art process since these limitations are only results of the prior art process. Further, the original specification also does not support these inherent results.

The argument that applicants were able to achieve equivalent for better performance in the presence of sulfur impurities from a catalyst composition having less than 0.3 weight % potassium and a molar ratio of F to K of less than 2:1 is not persuasive since assuming arguendo that catalyst C yielded unexpected results, catalyst C is not the catalyst is used in the claimed process (see claims). It has been established that evidence of unobviousness must be commensurate in scope with the claims. In re Kulling 14 USPQ 2d 1056, 1058 (Fed. Cir. 1990); In re Clemans 206 USPQ 389 (CCPA 1980); In re Dill 202 USPQ 805, 808 (CCPA 1979); In re Greenfield 197 USPQ 227 (CCPA 1978); In re Lindner 173 USPQ 356, 358 (CCPA 1972); In re Hyson 172 USPQ 399 (CCPA 1972); In re Tiffin 171 USPQ 294 (CCPA 1971); In re Mclaughlin 170 USPQ 209 (CCPA 1971); In re Kennedy 168 USPQ 587 (CCPA 1971); In re Law 133 USPQ 653 (CCPA 1962).

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thuan D. Dang whose telephone number is 571-272-1445. The examiner can normally be reached on Mon-Thu.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
